PROJECT BRIEF

Project Overview

This project demonstrates a complete AI-powered content production system built for Red Bull — one of the world's most recognized consumer brands. Rather than producing individual pieces of content in isolation, the goal was to build a **repeatable, scalable system** that any brand manager or content team could adopt and run consistently.

The system was developed using a brand audit-first methodology: I began with a full competitive and brand intelligence analysis, identified strategic content gaps, then built the voice framework and calendar around those gaps. Every content decision in this project is grounded in real strategic insight — not generic AI output.

Red Bull Revenue (2024)	Identified female market gap	Full content calendar	AI prompt templates

WHAT WAS BUILT

Three Integrated Deliverables

01 **Brand Voice Guide (.docx)**
Evolved voice identity for Red Bull including 5 voice attributes (current vs. proposed), do's & don'ts, vocabulary guide, platform tone matrix, and 3 AI master prompts. 2 pages, portfolio-ready.

02 **30-Day Editorial Calendar (.xlsx)**
Full month of content across Instagram, TikTok, and LinkedIn with hooks, caption drafts, CTAs, and visual direction for each post. Includes a Voice Quick Reference sheet and AI Prompt Library sheet.

03 **Content System Case Study (this document)**
Portfolio-facing documentation of the system: strategic rationale, AI workflow, 5 before/after content examples showing prompt-to-refined-output, and the documented methodology for briefing a junior team member to use the system.

STRATEGIC FOUNDATION

Why Red Bull Needs an Evolved Voice

The starting point for any content system is a clear-eyed analysis of where the brand stands today and where its audience is going. Red Bull's audit surfaced four structural gaps that this content system was designed to address:

GAP	EVIDENCE	CONTENT STRATEGY RESPONSE
Gen Z Authenticity	Over-polished content underperforms vs. raw competitor content on TikTok. Ghost engagement rising.	Week 1–2 content uses POV, low-production, and UGC formats intentionally.
Female Audience Gap	Celsius and Alani Nu are capturing Red Bull's female market share with inclusive content strategies.	Week 3 content explicitly addresses inclusion; personas include female athletes and creators.
TikTok Underperformance	TikTok-native content lags vs. YouTube and Instagram in Red Bull's mix. Discovery platform left underdeveloped.	TikTok hooks engineered for algorithm: 6-word or fewer hooks, trending sound strategy, duet/stitch mechanics.
Ingredient Transparency	73% of Gen Z checks ingredients before purchase (NielsenIQ 2024). Red Bull avoids the topic entirely.	Week 3 content directly addresses ingredients with confident, honest brand voice — turns liability into trust.

AI WORKFLOW

How the System Was Built

The AI content engine is not just a collection of AI-generated posts. It is a structured workflow where AI accelerates research, drafting, and iteration — while human judgment controls strategy, tone calibration, and final quality. Here is the documented process:

STEP	TOOL / METHOD	WHAT AI DID	WHAT I DECIDED
1. Brand Audit	WebSearch + Synthesis	Ran 12+ searches on Red Bull positioning, market share, competitor strategies, consumer sentiment.	Identified the 4 strategic gaps. Chose which gaps to address in the content calendar and in what order.
2. Voice Framework	Claude (LLM)	Generated draft voice attributes, vocabulary options, and platform tone descriptors.	Evaluated against Red Bull's brand reality. Rejected 3 attribute drafts as off-brand. Rewrote 2 from scratch.
3. Calendar Content	Master Prompts + Claude	Generated initial hook, caption, and CTA drafts for all 30 days using the master prompt library.	Refined every hook for Red Bull's specific voice. Replaced generic outputs with brand-specific references (specific athletes, platform behaviors, cultural moments).

4. Prompt Library	Iterative Prompt Engineering	Tested 20+ prompt variants across platforms to find the formulas that reliably produced on-brand output.	Selected 7 final prompts based on output quality, brand accuracy, and reusability. Documented negative constraints (words to avoid).
5. System Docs	Python / ReportLab	Generated professional PDF and Word formatting automatically from structured data.	Designed the information architecture, section hierarchy, and visual system. Wrote all strategic copy.

CONTENT EXAMPLES

5 Before/After Content Examples

Each example shows the AI prompt used, the raw AI output, and the human-refined final version. The refinement notes explain the strategic reasoning behind each edit — this is the critical difference between AI-generated and AI-augmented content.

1 INSTAGRAM

PROMPT (INPUT)

Write a Red Bull Instagram Reel caption. Show a female athlete training at 5am. Tone: bold, raw, second-person. Max 5 lines. Include a time reference.

REFINED OUTPUT

She's up before the sun. Before the noise. Before the world tells her what she can and can't do. 5am is hers. And Red Bull is right there with her. Tag a woman who runs at 5am.

Human refinement: Removed 'before the world tells her what she can and can't do' — preachy, not on-brand. Repl

2 TIKTOK

PROMPT (INPUT)

Write a TikTok hook for Red Bull content about the 3pm energy slump. 6 words or fewer. Generate 3 options.

REFINED OUTPUT

Option 1: It's 3pm. You know. (5 words) Option 2: Your 3pm is real. (5 words) Option 3: 3pm hits different every time. (6 words)

Human refinement: Kept Option 1 — most direct. Changed 'Your' in Option 2 to a more specific verb. Tested agai

3 LINKEDIN

PROMPT (INPUT)

Write a LinkedIn brand insight post. Topic: Red Bull's Gen Z content strategy gap. Insight-first headline, 4–5 sentences, end with question. ~150 words.

REFINED OUTPUT

Red Bull built the world's most watched YouTube channel by making extreme sports feel accessible. But on TikTok — where Gen Z actually discovers brands in 2025 — the strategy isn't translating. The gap: high-production content doesn't perform on an algorithm built for authentic, participatory, lo-fi moments. The brands winning right now (Ghost Energy, Celsius, Alani Nu) film on phones and invite their communities in. Red Bull films with

Human refinement: Original was strong. Adjusted opener from passive to active framing. Added specific competit

4 INSTAGRAM

PROMPT (INPUT)

Write a caption for a Red Bull UGC spotlight. Fan: Devin, 19, motocross, Texas, self-taught, 8 months of DMs. Celebratory but authentic. 5 lines max.

REFINED OUTPUT

Devin has been sending us his motocross clips for 8 months. No sponsor. No agent. Just pure love for the ride. Today we finally said yes. This is what Red Bull is actually made for — the riders no one has heard of yet. Welcome to the team, Devin. @devin_handle

Human refinement: Preserved 'today we finally said yes' — emotionally strong. Added 'the riders no one has hea

5 INSTAGRAM

PROMPT (INPUT)

Write a caption about Red Bull's ingredients. Tone: direct, honest, slightly self-aware. Address the myth that people don't know what's in it. 4 lines.

REFINED OUTPUT

Yes, there's caffeine. Yes, it works. Here's what's actually in the can: Caffeine, taurine, B vitamins, and your choice of sugar or not. That's it. We've been the same formula since 1987. Not hiding anything. Never were. What do you want to know?

Human refinement: Restructured to lead with confidence, not defensiveness. Added '1987' for brand heritage anc

HOW TO USE THIS SYSTEM

Briefing a Junior Team Member

A well-built content system should be teachable. The following brief is how I would onboard a junior content coordinator to operate the Red Bull AI Content Engine independently.

To produce a new month of content:	1. Start with the Brand Voice Guide. Read sections 2–4 before writing anything.
	2. Open the AI Prompt Library sheet in the Excel calendar. Choose the prompt that matches the platform.
	3. Replace [BRACKETED PLACEHOLDERS] with the specific topic, athlete, or moment.
	4. Paste the prompt into Claude, ChatGPT, or your LLM of choice. Generate 3 variants.
	5. Evaluate against the Do's and Don'ts table. Ask: does this sound like Red Bull or does it sound like a generic brand?
	6. Refine: add a specific name, date, place, or detail that makes it feel real. Remove any wellness-adjacent language.
	7. Drop into the calendar with visual direction notes. Mark as Draft → ready for design and scheduling.

OUTCOMES + POSITIONING

What This Project Demonstrates

Skill Demonstrated	Evidence in This Project	Role Relevance
Content Strategy	30-day calendar built around 4 specific strategic gaps identified in the brand audit. Theme architecture has a logic — not just random content.	Brand Marketing, Content Marketing
AI Tool Fluency	7 engineered prompts with negative constraints, style guidance, and platform-specific formatting rules. Not just 'ask AI to write it.'	All marketing roles, 2025+
Brand Voice	Full voice framework built from brand intelligence, not guesswork. Can explain why each word choice was made.	Brand, Content, PMM
Systems Thinking	Three coordinated deliverables (voice doc, calendar, case study) that work as an integrated system — not three separate projects.	Marketing Ops, Growth, PMM

Resume Bullet: "Designed an AI-powered content production system for Red Bull, including an evolved brand voice framework, 30-day editorial calendar, AI prompt library (7 templates), and documented human-refinement workflow — enabling scalable, consistent content output across Instagram, TikTok, and LinkedIn."
